Portfolio: anigbogujohn.github.io GitHub: github.com/AnigboguJohn Live: Gather · RegRadar · Tranyer · Recipes

PROFESSIONAL SUMMARY

Full-stack developer with 4+ years of hands-on web development, from PHP/Laravel websites to modern React, TypeScript, Node.js and Python systems. I build complete products end to end: user interface, APIs, databases, real-time features, payments, AI integration and cloud deployment. Recently I designed and shipped two live AI products: **Gather**, a video-meeting platform for low-bandwidth African networks with captions translated into 7 languages and AI meeting summaries, and **RegRadar**, a compliance assistant that answers questions about Central Bank of Nigeria regulations with exact citations. A degree in Architecture and Design gives me a strong eye for layout, usability and clean visual design.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, PHP, SQL, HTML5, CSS3/Sass, C++ (basic)
Frontend	React, Vite, Tailwind CSS, shadcn/ui (Radix), React Router, TanStack Query, Blade, Bootstrap
Backend	Node.js, Express, Socket.IO, Python FastAPI, Laravel, REST APIs, JWT authentication, Zod validation
Real-time & media	WebRTC (LiveKit), WebSockets, Server-Sent Events, screen sharing, simulcast
Databases	PostgreSQL (migrations, full-text search, pgvector, indexing), MySQL, Supabase
AI	RAG with citations, hybrid search (full-text + pgvector), Claude API, Groq, Gemini, Ollama, Whisper speech-to-text, translation and summaries
Integrations	Paystack, Flutterwave, Stripe, WhatsApp Cloud API, email (Brevo/SMTP), SMS, Google OAuth & Calendar
Cloud & DevOps	AWS (ECS Fargate, RDS, S3, CloudFront, EventBridge), Terraform, Docker, GitHub Actions CI/CD, Render, Vercel, Neon, GitHub Pages
Testing	Playwright (incl. accessibility checks), pytest, Node test runner, API end-to-end tests
Security	Two-factor sign-in (TOTP), hashed one-time codes, rate limiting, HMAC webhook checks, end-to-end encryption, audit logs

PROJECTS

Gather: Video Meetings for Africa (Full-Stack, Live) 2026

Live: gather-44mh.onrender.com · Code: github.com/AnigboguJohn/Gather

A video-meeting app (like Zoom or Google Meet) built for weak, expensive mobile data. Guests join from a WhatsApp link in their phone browser, with no account.

- Built three services: a React/TypeScript web app, a Node.js/Express + Socket.IO server and a Python/FastAPI AI service, on PostgreSQL (about 12,800 lines of code).
- Real-time audio, video and screen sharing on a LiveKit (WebRTC) media server. Guests' mics stay locked until the host approves a raised hand, and the server enforces it.
- Data-saver mode at about 50 MB per hour (simulcast, DTX, sending only the video people watch), with a live data meter.
- Live captions translated into English, Yoruba, Hausa, Igbo, Pidgin, Swahili and French (Whisper speech-to-text; Groq/Gemini translation with automatic fallback).
- AI meeting summaries and action items in each attendee's language, sent by WhatsApp and email. "Ask your meetings" search over past transcripts.
- Scheduling with weekly meetings, time zones, calendar invites (.ics), RSVP links, automatic reminders and Google Calendar sync.
- Paystack and Flutterwave subscriptions with verified webhooks, optional end-to-end encryption, an admin dashboard, and a Trustpilot-style review system with live updates.
- Deployed on Render with automatic deploys from GitHub; Docker Compose for local work; unit tests (Node, pytest) and Playwright browser tests.
- Tested live in real calls with 4 guests; first verified user review received.

Stack: React · TypeScript · Vite · Tailwind · Node.js · Express · Socket.IO · Python · FastAPI · PostgreSQL · LiveKit/WebRTC · Docker · Render

```
Gather/
├─ web/        React app: pages/, room/ (call screen, captions, data meter), components/
├─ server/     Node API: modules/ (auth, meetings, rooms, billing, reviews, scheduler), migrations/
├─ ai/         Python FastAPI: speech-to-text, translation, summaries
├─ tests/e2e/  Playwright browser tests
└─ docker-compose.yml · render.yaml · docs/ARCHITECTURE.md
```

RegRadar: AI Regulatory Compliance Assistant (Full-Stack, Live)

2026

Live: regradar-kur5.onrender.com · Code: github.com/AnigboguJohn/regradar

A tool for compliance teams at banks, fintechs and payment companies. It tracks new Central Bank of Nigeria (CBN) circulars and answers questions about them with citations.

- Automatically collects new CBN circulars, downloads the PDFs, splits them by section heading and indexes them. One broken PDF never stops a run.
- "Remi" AI assistant answers in plain English using only the retrieved regulations, and cites the exact document, reference number and page for every claim (RAG).
- Hybrid search: PostgreSQL full-text plus pgvector semantic search, merged with Reciprocal Rank Fusion.
- Impact analysis: compares each new regulation with the company's own policies and flags conflicts with severity, evidence and a recommended fix.
- Multi-tenant workspaces with team invites, email alert digests, an audit log, and an admin console with two-factor sign-in (TOTP, QR code) and system-health alerts.
- Works with Claude, Groq, Gemini or Ollama, and falls back to showing cited passages when no AI is available.
- AWS infrastructure as code with Terraform (ECS Fargate, RDS, S3, CloudFront, EventBridge); free live hosting on Render with Neon Postgres. CI/CD and uptime checks with GitHub Actions; pytest, API end-to-end and Playwright tests, including accessibility (WCAG 2.1 AA) checks.

Stack: React · TypeScript · Vite · Tailwind · Node.js · Express · Python · FastAPI · PostgreSQL + pgvector · Claude API · Terraform · AWS · Docker · GitHub Actions

```
regradar/
├─ apps/web/         React app: pages/ (Ask, Regulations, Impact, Policies, Settings), admin/
├─ services/api/     Node API: auth, workspaces, alerts, audit, scheduling
├─ services/ai/      Python FastAPI: ingest, chunking, hybrid search, RAG, impact analysis
├─ db/migrations/    PostgreSQL schema (7 migrations)
├─ infra/terraform/  AWS: ECS, RDS, S3, CloudFront, EventBridge, monitoring
└─ .github/workflows/ (CI, Pages, uptime) · tests/ (e2e, browser) · docs/
```

Tranyer: Escrow Marketplace for Buyers and Sellers (Live)

2026

Live: tranyer.vercel.app · Code: github.com/AnigboguJohn/Tranyer-Project

- Multi-vendor e-commerce marketplace with buyer and seller accounts, cart, wishlist, checkout (Paystack and Stripe), order tracking and an admin dashboard.
- 8 languages and 7 currencies (NGN, USD, EUR, GBP, KES, ZAR, GHS) with automatic conversion and location-based pricing.
- Product catalogue with search, filters (price, brand, rating, category), pagination and grid/list views, tested with 100,000+ generated products in 20 categories.
- Seller tools (sell, analytics, advertise, rewards), an AI shopping-assistant page, and sign-in through Supabase.

Stack: React · TypeScript · Vite · Tailwind CSS · shadcn/ui · TanStack Query · React Hook Form · Zod · Supabase · Vercel

```
Tranyer-Project/
├─ src/pages/      40+ pages: Products, ProductDetail, Cart, Checkout, TrackOrder, account/, admin/
├─ src/contexts/   Auth, Cart, Wishlist, Localization, Subscription, Theme
├─ src/lib/        translations, product generator, product APIs
└─ src/components/ · tailwind.config.ts · vite.config.ts
```

My Recipes Book: Recipe App (Laravel 12, Live)

2024 · 2026

Live: recipes-app-7qw7.onrender.com · Code: github.com/AnigboguJohn/Recipes_App_Laravel

- Mobile-first recipe app: search by name or ingredient, category filters, saved recipes, 1 to 5 star ratings, and a step-by-step cooking mode with automatic timers.
- Signed-in cooks post recipes with photo upload, servings, difficulty and calories; only the owner can edit or delete, enforced on the server.
- Upgraded the original Laravel 5.4 code to Laravel 12 on PHP 8.3 and fixed security holes (profile and recipe ownership checks, unsafe file deletion).
- Deployed with Docker on Render, with a demo account and 45 automated browser tests (Playwright).

Stack: PHP 8.3 · Laravel 12 · Blade · Eloquent · SQLite/MySQL · JavaScript · CSS · Docker · Render

```
Recipes_App_Laravel/
├─ app/Http/Controllers/  Posts (recipes, search, cooking mode), Saved, Rating, Home (profile), Auth/
├─ database/              migrations/ (recipes, favorites, ratings) · seeds/ (demo recipes, photos)
├─ resources/views/       posts/ (index, show, cook, form), partials/, saved, home, auth/
└─ public/css · public/js · Dockerfile · render.yaml
```

ADF Magazine: Defence News Blog Website

2025

Live: anigbogujohn.github.io/blog_web_design · Code: github.com/AnigboguJohn/blog_web_design

- Responsive multi-page magazine website with article pages, image-rich layouts and mobile navigation, hosted on GitHub Pages.

Stack: HTML5 · CSS3 · Sass (SCSS) · JavaScript

```
blog_web_design/
├─ index.html · generic.html · blog pages/ (article pages)
└─ assets/ (css, sass, js, webfonts) · images/
```

Switch: Savings and Loans Platform (Esusu-style)

2024

Code: github.com/AnigboguJohn/Switch

- Digital savings and loans system, an alternative to banks for communities. Members sign up, verify with a one-time code (OTP), deposit, withdraw, borrow and repay.
- Member dashboard with balance and full transaction history, using PHP sessions and MySQL.

Stack: PHP · MySQL · HTML · CSS

```
Switch/
├─ signup.php · signin.php · otp_verification.php
├─ dashbord.php · deposit.php · withdraw.php · borrow.php · payback.php
└─ transactions.php · transaction_history.php · connection.php
```

WORK EXPERIENCE

Web Developer, Orbit Brothers Communication, Awka

Sept 2022 – Present

www.obcgroup.com.ng

- Meet clients to gather requirements and turn them into website plans and features.
- Design, code and test websites and web apps, working with graphic designers on layout.
- Add audio, video and graphics, and test and fix sites across browsers and devices.
- Work with the team to collect site content and deliver projects on time.

Full-Stack Web Development Intern, Kodex Academy, Awka

Sept 2021 – Present

www.kodexng.com

- Full-stack web development with PHP and Laravel.
- Frontend: HTML, CSS, Bootstrap, Sass, Less and JavaScript. Backend: PHP, Laravel and C++.

EDUCATION

B.Sc. Architecture and Design, Nnamdi Azikiwe University, Awka — Oct 2019 – Dec 2023

Senior School Certificate (SSCE), St Mary's High School, Ifitedunu, Anambra State — 2014 – 2019

EVENTS AND COMMUNITIES

- Enugu State Tech Summit · Anambra Tech Fest · Hackathons
- Anambra Tech Community · Kodex Community · Franscia Community
- Nnamdi Azikiwe University Google Student Community

STRENGTHS

- Fast learner who helps teammates grow
- Strong analysis and problem solving
- Organised, dependable and focused on results
